🔗 LeetCode

Education

Indian Institute of Information Technology, Vadodara

Dec 2022 – Present

B.Tech in Computer Science and Engineering

Experience

devx AI labs

January 2026 – Present

Software Development Engineer Intern

Surat, Gujarat

- Worked with **structured API data pipelines** to transform and render dynamic datasets in UI components, improving overall **data consistency** and reducing edge-case failures.
- Designed **reusable content models** using **Strapi (Headless CMS)** and integrated them via APIs to enable **dynamic, CMS-driven UI rendering**.
- Integrated **Shopify Storefront API** and **Shiprocket** to support **end-to-end order workflows**, automating product and order handling.
- Improved frontend performance using **code-splitting** and **lazy loading**, ensuring smoother rendering for data-heavy pages.

Pistalix Software Solutions

May 2025 – Jul 2025

Software Development Intern

Surat, Gujarat

- Developed an interactive **3D AR Product Viewer** using **React**, **Three.js**, and **WebXR** for immersive product visualization.
- Applied **Draco compression** and optimized rendering techniques to improve **load time** and runtime performance.
- Built **modular and reusable components**, improving scalability and maintainability of the frontend codebase.

Projects

Snipr — URL Shortener & Management Platform | Supabase (PostgreSQL, Auth, Storage), React.js, Vercel 🐙

- Designed a **multi-tenant system** using **PostgreSQL Row-Level Security (RLS)** to ensure secure user-level data isolation.
- Implemented a **time-based expiration (TTL)** mechanism to automatically deactivate expired links.
- Built a **URL redirection service** using indexed queries, achieving **low-latency responses** for frequent access patterns.
- Integrated **basic analytics tracking** to capture usage patterns such as device type and approximate location.

Kinetiq – Distributed Event Booking System | Node.js, Kafka, PostgreSQL, MongoDB, Redis, Docker 🐙

- Designed a **distributed event booking system** using **Kafka** to decouple request handling from processing via an event-driven architecture.
- Implemented a **producer-consumer model** with multiple worker services to process booking requests asynchronously.
- Separated read and write workloads using **PostgreSQL (writes)** and **MongoDB (reads)**, improving query efficiency for different use cases.
- Used **Redis** for caching frequently accessed data to reduce repeated database queries.

Skills & Coursework

- **Languages:** C/C++, JavaScript, SQL
- **Frontend:** React.js, HTML, CSS, Tailwind CSS
- **Backend & APIs:** Node.js, Express.js, REST APIs
- **Databases:** PostgreSQL, MongoDB, MySQL
- **Tools & Platforms:** Git, GitHub, Docker, Vercel
- **Concepts:** Data Structures & Algorithms, OOP, DBMS, Operating Systems, **System Design Basics**

CERTIFICATIONS

HackerRank Certificate: SQL (Intermediate) ([Link](#))

HackerRank Certificate: Node.js (Basic) ([Link](#))

Achievements

Solved 500+ coding problems on LeetCode; achieved a 365-Day Streak Badge and multiple topic-specific badges in algorithms and data structures.
